

# Lighttpd

DokuWiki will run just fine with [Lighttpd](#) and PHP through FastCGI.

1. create /etc/dokuwiki/lighttpd.conf
2. cd /etc/lighttpd/conf-available
3. ln /etc/dokuwiki/lighttpd.conf 50-dokuwiki.conf

```
1. /etc/lighttpd/conf-available/50-dokuwiki.conf ->
   /etc/dokuwiki/lighttpd.conf
```

4. enable config with lighttpd-enable-mod dokuwiki
5. /etc/init.d/lighttpd force-reload

## /etc/dokuwiki/lighttpd.conf

```
alias.url += ("/dokuwiki" => "/usr/share/dokuwiki")

$HTTP["url"] =~ "^/dokuwiki" {
    server.follow-symlink = "enable"
}

$HTTP["url"] =~ "/(\.|_)ht" {
    url.access-deny = ( "" )
}

$HTTP["url"] =~ "^/dokuwiki/(bin|data|inc|conf)" {
    url.access-deny = ( "" )
}
```

- See [deny\\_directory\\_access\\_in\\_lighttpd](#)
- See [rewriting](#) for how to set up rewrite rules for clean URLs with lighty.
